## **New Bilstein BTS System for 2005 and later Ford F-250/F-350 4WD**

Bilstein announces the release of their new BTS systems for 2005 and later Ford F-250/F-350 4WD Super Duty pickups. These new BTS systems include replacement front coil springs and two 5100 Series shocks. This system raises the front of the truck by 2.25", increases wheel travel and vastly improves overall handling characteristics.

Bilstein 5100 Series monotube gas pressure shocks are based on Bilstein's world famous, race inspired monotube gas pressure shock absorber technology. These shocks also feature high capacity digressive pistons and split valving specifically tuned for lifted truck applications. The result is better control and more precise handling, especially when combined with the matching rear 5100 Series shocks that are also available for Super Dutys.

This new Bilstein BTS system has a MSRP of \$409.00, which includes the two front coil springs and two 5100 Series shocks. The matching rear 5100 Series shocks carry a MSRP of \$84.99 each.

These new F-250/F-350 4WD 5100 Series shocks not only provide superior performance characteristics, but also come with a lifetime aftermarket warranty. Bilstein designs and manufactures shocks for most cars, trucks and SUVs.
