

Total Seal® Introduces New Gold Finish™ Ring Sets

Total Seal's® new Gold Finish™ rings offer a significant improvement in ring seal over typical "shelf" ring sets.

Total Seal®, taking what they've learned from the manufacturing of their Diamond Finish™ ring line, has applied a major portion of that knowledge to the Gold Finish™ ring line.

These sets feature the latest in ring technology and provide reduced blow-by and increased horsepower. Gold Finish™ is an economical alternative to Total Seal's® Diamond Finish™ and was developed specifically for the "Saturday Night" and "Sportsman" level racers.

Heat treated ductile iron top rings with Total Seal's® flake proof C-92™ PVD face coating are produced to +/- .0002" parallel standard, helping to improve the ring to ring groove seal thus reducing blow-by.

Also included is Total Seal's® new sharp edge technology napier 2nd rings providing reduced drag and improved oil control over conventional designs.

Total Seal's® tight tolerance oil rings round out the package with their tight rail end gaps and custom designed expanders offering unparalleled oil control while at the same time reducing drag.

Available with conventional or gapless top rings.
